

PARKING RESERVATIONS

Parking booking system

The Parking Reservations module allows the user to reserve and reserve a parking space in the parking area he wishes to access. The solution makes it possible to improve the management of parking spaces in the parking area and to offer the customer an additional service to improve his or her experience. The service is completely cloud-based, accessible from any platform.

Main Features

- Freedom of choice for the customer.
- Hourly or daily booking.
- Better management of parking spaces.
- Easy to use interface.
- Portal manager with multiple permission levels.
- Detailed reports of use.
- Filters for detailed data search.

Operation

User: The portal is easy to use and allows you to select the type of reservation, the date and time of validity and conclude with payment, through the main circuits (Visa, PayPal, etc.). At the end of the operation, the user receives a confirmation email with a QR-Code that, printed or shown on the smartphone, allows access to the parking area within the validity of the reservation. Any stay of the user beyond the validity interval can be regularized at checkouts, automatic or manual. The forms to be filled in for booking are contained in a frame that is easy to integrate into a website and are customizable.

Manager: The portal allows you to view and manage the bookings received in the selected period. You can create multiple types of bookings, hourly or daily, with different rates as needed. There are numerous detailed reports to clearly and immediately view all the booking information, such as sales, number of requests, etc. Each report is exportable in.csv format. The exchange of booking information takes place through the platform Web and the database of parking, to ensure maximum security and reliability of data.
